

Week 4 Update for Recitation 15 Group 6

Project Board:

Our GitHub Projects page, all User stories are complete.

An example of a user story with a description and an acceptance criteria.

Release Notes:

Our week 4 release notes can be found here, rest of release notes are linked to Github repo: [Github Releases](#)

New Features

- Added updating Navigation bar that alters what links are available depending on if the user is not logged in.
- Updated home page with user testimonials.
- Github repository linked to footer.
- Price updating occurs when the user logs into the page.

Bug Fixes

- Fixed footer to remain at the bottom of the page even with varying container sizes.
- Fixed issue with user being able to log in multiple times and cause the user session to crash.

Enhancements

- Added style changes to watchlist and notification page to better match the theme of the rest of the application.
- Added more accurate photos to the front page of the website, updated the carousel as well.
- Added successful messages after watchlist items have been updated, added welcome message to the discover page as well.
- Updated notification page style
- Card sizes now are consistently sized on the discover page.

Meeting Notes:

Up to date meeting note for the first three weeks can be found here:

https://github.com/DelanHuang/RECITATION-015-TEAM-6-Casa_Catalog/tree/main/Team%20Meeting%20Logs

Our notes for this week's team meeting and the TA meeting notes should also be added by Thursday at the latest.

Functional Features:

Users can obviously login to the website or register if they are a new user. Upon successful login, the user is directed to the discover page where they can search for items on Ebay with the working search bar and hit 'Enter'. From here, the items searched for will appear on the page in a card fashion. Each item has the ability to "Buy Now" which takes the user to the linked url of the item on Ebay's website. The user can also add the item to a "Watchlist" which essentially stores the item in a cart with price monitoring capabilities. On the Watchlist page, users can view the items they have selected, remove items from the cart, buy the item now, or update their "watch price". The "watch price" is a price point the user has decided they would like to be notified if the item drops at or below the specified price. Once this price has been updated, the user can be notified on the notifications page which displays all the products that have reached a "Low Price" which gathers data on the most recent price fluctuations and determines if a product has reached a lower price. Additionally on this page, the user is notified if any products have reached or dipped below the specified "Watch Price".

Main Branch:

All features have been merged into the main branch. The only changes that will be made to the main branch will be adding our presentation, project report, team meeting logs, and setting up a dummy account for our final presentation to highlight the functionality of our website.

Individual Commits and Team Contribution:

One thing to note is that we had most of the functionality of our page complete going into this final week, so the number of meaningful commits per person is likely to be a little bit lower.

Name	Meaningful Commits	Tasks Worked On
Brendan Leonard	4	The major items I updated were changes to discover page by removing "Last purchase price" and "Expected Price". Additionally I updated the page to display who the user is that has logged in, and there are now messages that appear on the discover page, as well as on the watchlist page when a user has updated a price. For the most part, my backend duties wrapped up earlier last week in finishing the watchlist page functionality. I also fixed carousel items on the front and bug changes with the discover message.

Andrew Zirger	3	The most important thing that I worked on this week was getting the backend functionality of price updating to work. Now, every time a user logs in, it fetches up to date information on the products in their watchlist. I also briefly worked on anchoring the footer to the bottom of the page.
Delan Huang	1	I finished the footer adding the styling and changing the layout. I made sure the links attached to the footer functioned properly. It was determined later that a few minor changes were needed and that was done by Garrett.
Garrett Carlisle	4	The main things I worked on this week were styling the notification page and making the product cards on the discover page all be a consistent size, instead of different sizes depending on the content stored in them. Now, the product names should also not overflow if the box gets too small, instead creating a scroll bar. I also updated the navbar such that if you are logged out, you don't have access to the features you need to be logged in for and the logout button, and if you are logged in, you have access to the functional features but don't have access to the register and login page. This initially created a bug where if a user made an invalid login, the page would crash when rendering, but I have since fixed this.
Manuel Hinojosa	1	css touchups
Suhyun Bae	3	The important thing I worked on this week was to make the discover page and watchlist page style change, and change the homepage image, home page font-color changed. I resized the container box of the discover page and positioned the text inside more right end, and changed the button colors.

Name	Team Contribution
Brendan Leonard	Created the release notes for this week and linked all of the release notes in this document. Worked on project report as well as supporting other teammates with commit issues and

	design ideas. Updated project board to reflect all the work completed, and added the functional features to this document as well.
Andrew Zirger	Worked on updating prices for the items in a user's watchlist upon login. Also did some work on the project report document. I also added a script to anchor the footer to the bottom of the page.
Delan Huang	Updated presentation, Use Case Diagram, and presentation. Created Architecture Diagram.
Garrett Carlisle	Updating some of the documents in the repository. Updating the readme.md file. Ensuring that changes made from other teammates do not get overwritten by changes to the same pages. Adding my contributions to the project report.
Manuel Hinojosa	Added discord channels for communication/css touchups
Suhyun Bae	Worked to share design ideas and presentation ideas, worked on updating home page design and ensuring not to make conflict with other team members' works
